Fund Narrative
The fund slightly underperformed the benchmark by 14 basis points this quarter, and now trails for the 3-year but leads for the 5-year. The underperformance was due to the exposure to Treasuries which lagged virtually all sectors in the quarter. Current Status: Retention, no change recommended.

Fund Narrative
Like all equity funds, this large growth fund had a strong quarter but lagged the S&P 500 Index benchmark; however, the manager outperformed for the 3- and 5-year. The manager's Sharpe Ratio exceeded the category mean for the 3- and 5-year and the the 3-star Morningstar rating minimum requirement was only met for the 5-year. Current Status: Retention, no change recommended.

Fund Strategy

Using a quantitative approach, this fund seeks to build a stock portfolio with a risk level comparable to the S&P 500 Index but is able to earn an annual return higher than the Index. Computer models rank 4000 stocks based on value, discounted cash flow, and earnings momentum. Portfolio weights are similar to the Index; managers take many small positions to overweight or underweight the Index based on individual stocks risk/reward profile.

ADR	American Depository Receipt, a negotiable receipt for the shares of a foreign-based corporation held in trust by a U.S. bank that entitles a shareholder to all dividends and capital gains.
Alpha	Alpha is a statistical calculation based on a manager's beta and the rate of return of the index over the period. Alpha measures whether a manager has added value to or detracted from returns on a risk-adjusted basis. Alpha can be used when comparing dissimilar products because alpha is adjusted for risk and therefore the product with the highest alpha added the most historical value relative to its risk level
Annualized Return	Rate of return of the account smoothed as though the return occurred equally over twelve-month periods. When the specified time frame is for less than a year, the rate of return is projected as though the same performance continues to occur for a twelve-month time period.
Assets Managed in Style	The total assets managed in all investment vehicles of the investment style.
Average Market Capitalization (\$ Wtd.)	The average market capitalization of all stocks in a given portfolio, weighted by each company's portion of the portfolio's market value.
Beta	A measure of volatility. A beta over 1.0 indicates above-market volatility; below 1.0, less volatility.
Book Value	The balance sheet value of assets minus the balance sheet value of liabilities. Also known as shareholders' equity
Bottom-Up Investment Approach	The investment manager concentrates on fundamental analysis of a company's financial statements. In addition, an investment manager may examine other aspects of the company such as strength of management, new product lines, valuation, historic record, etc.
Cumulative Annualized Rate of Return	Funds appear in order of their absolute rate of return over a common time period, with the highest rate of return appearing first
Cycle Analysis	The index, by definition, automatically has an Up-Cycle of 100. If a manager has an Up-Cycle number higher than 100, the manager has historically captured more than 100% of the rising market. If a manager has a Down-Cycle number of less than 100, the manager has historically captured less than 100% of the falling market.
Dividend	A payment issued by a company that distributes a portion of its value, usually in the form of cash.

Duration	The weighted maturity of a fixed-income investment's cash flows, used in the estimation of the price sensitivity of fixed-income securities for a given change in interest rates. Time periods are weighted by multiplying by the present value of its cash flow divided by the bond's price. (A bond's cash flows consist of coupon payments and repayment of capital). A bond's duration will almost always be shorter than its maturity, with the exception of zero-coupon bonds, where maturity and duration are equal.
Earnings	Earnings are a company's accounting profits or losses, typically reported four times each year.
Emerging Markets	Countries whose economies are considered emerging or underdeveloped.
Fundamental	A company's underlying financial situation.
Growth Style Investing	Growth investors purchase companies that have above-average earnings growth
Hedging	A strategy designed to reduce risk by offsetting potential losses from existing investments. This practice is often used in international investing, where investment managers often use hedging techniques to reduce exposure to fluctuating currencies
Investment Vehicle	The account type that an investor can gain access to an investment manager. Examples of investment vehicles are pooled or commingled funds, mutual funds, separate accounts, and limited partnerships.
Large Cap	Large Capitalization - refers to those companies with a market capitalization of greater than \$10 billion.
Liquidity	The ability to buy or sell an asset quickly and in large volume without substantially affecting the asset's price.
Market Capitalization	The dollar value of a public company based on the total number of shares of stock available multiplied by the price per share.
Median Market Capitalization (\$ Wtd.)	The market capitalization of the stock that represents the middle of the portfolio's cumulative market value. Half of the portfolio is invested in stocks larger than the median and the other half is invested in stocks smaller than the median.
Micro Cap	Micro Capitalization - refers to those companies with a market capitalization of less than \$500 million.
Mid Cap	Mid Capitalization - refers to those companies with a market capitalization between \$2 and \$10 billion.
Net of Fees	After subtraction of management fees.
Portfolio	Refers to the complete list of securities held in an investment vehicle.
Price-to-earnings (P/E) ratio	Calculated by dividing the current share price by the trailing twelve-months earnings per share
Price-to-book (P/B) ratio	Calculated by dividing the share price by the book value per share.
Relative Rank	"Rank" reflects funds' performance within the full universe of comparable products, which includes similar investment styles and objectives. The rank reflects which percentile the manager's absolute rate of return falls within relative to its peer universe, with 1 = highest and 100 = lowest

R-Squared (Coefficient of Determination)	A statistical measure of the degree to which the movements of two variables are related. An R-Squared closer to 1.0 indicates that the two variables tend to behave similarly or that by knowing one variable you can closely estimate the other variable.
Sharpe Ratio	A risk-adjusted measure calculated by using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe Ratio, the better the fund's historical risk-adjusted performance. The Sharpe Ratio is calculated for the past 36 month period by dividing a fund's annualized excess returns by the standard deviation of a fund's annualized excess returns.
Small Cap	Small Capitalization - refers to those companies with a market capitalization between \$500 million and \$1.99 billion.
Standard Deviation	Measures the range of returns and is based on a Normal Curve. Managers with lower standard deviations than the index have historically had returns that tended to fall closer to their mean return compared to the index. Managers with higher standard deviations than the index have historically had returns that tended to be further dispersed around the mean than the index. This is another measure of volatility, but it does not distinguish downside performance from upside performance.
Top-Down Investment Approach	The investment manager concentrates on analyzing the economy and investment environment to identify attractive economic sectors for investment. In international investing, a top-down investment approach is often used to identify attractive countries or regions for investment.
Treynor Ratio	The Treynor ratio is the return premium earned over the risk free rate by the series for each unit of risk taken, with risk measured as the beta of the series or portfolio relative to the market.
Value Added	Based on alpha, value-added shows how much value a manager added, after adjustment for the amount of volatility (risk) that a manager has experienced. A value-added of 1.0 means a manager has added 1% to annualized returns.
Value Style Investing	Value investors rely on an examination of the underlying or unrealized value of a company as the primary criterion for deciding whether or not to buy a company's stock. Value stocks are often priced lower than growth stocks due to slower growth expectations, recent financial difficulty, or a host of other reasons.
Years	This evaluation is based on quarterly return observations from inception for all advisors and the corresponding index
